SUNSYNK CONNECT

Revolutionising The Way We
Store, Generate & Control Energy

www.sunsynk.com
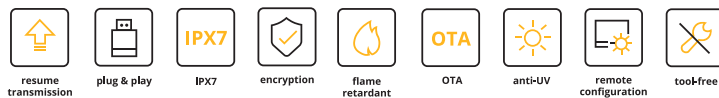

PLUG & START SAVING

Sunsynk is integrated with Octopus Agile. Our Data Logger platform has been integrated with Octopus Agile. Having access to these rates, you can setup and monitor your charge and discharge figures, this enables you to charge your battery at the cheapest rates. When the price increases your battery discharges and saves you money.

USING OUR SUNSYNK CONNECT APP

When using the Data Logger, we strongly advise that you read the manual before installing, which can be accessed by scanning the "Technical Support" QR code with the camera app on your smart phone.

The Sunsynk platform is now live and can be accessed by visiting the link: www.sunsynk.com

resume transmission | plug & play | IPX7 | encryption | flame retardant | OTA | anti-UV | remote configuration | tool-free

---

Complete Control. Using our Data Logger gives you complete control over your hybrid inverter. You will gain access to features that cannot be accessed via the inverter control panel, such as the update / upgrade feature to update the inverter operating system yourself.

Remote Control. Our Data Logger allows you to change and edit all settings remotely from anywhere in the world, provided that you have an internet connection.

App for PC, IOS and Android Devices. Our app has been specially tailored for the customer and installer.

Real-time Monitoring. The majority of our app works in real-time including any changes that you make will instantly update on your inverter.

Fully Integrated with Octopus Agile. You can set your charge / discharge price's and the system will automatically monitor the current tariff and amend the charge / discharge according to your setup.

Reporting. Generate custom reports and graphs to help you monitor and understand how your system is working and where you are saving money.

Recommended Settings. Using this feature you already have a head start on your installation. Once your inverter has been fitted, you can select from the list of recommended settings and import it straight to your inverter. Installers can also export settings from an inverter and upload to another one to cut down on their installation time.

Live Stats and Monitoring. You have access to multiple stats including live monitoring and reporting. Using this app allows you to see peaks in your energy usage, you can then customize your system to work around this to help you save money on your electricity bills.

Diagnostic Tool. When you install your system you will be notified if your communication cables are installed incorrectly, including notifications if your CT coil is facing in the wrong direction.
